CONTENTS OF VOLUME XX.

CVII. JANUARY, 1905.

The Equilibrium Pressure of a Vapor at a Curved Surface. ARTHUR A. BACON 1
On the Coefficient of Expansion of Quartz. HARRISON MCALLISTER RANDALL 10
Coefficients of Linear Expansion at Low Temperatures. H. D. AYRES 38
Note on Coefficients of Expansion at Low Temperature. J. S. SHEARER . . . 52
Electric Double Refraction in Carbon Disulphide at Low Potentials. GUSTAV W. ELMEN 54
New Books: *Miller:* Laboratory Physics; *Ames:* General Physics; *Lehmann:* Frick's Physikalische Technik; *Chwolson*, Lehrbuch der Physik 62

CVII. FEBRUARY, 1905.

On the Differential Transformer. A. TROWBRIDGE 65
Heat of Vaporization of Liquid Air. R. C. FENNER and F. K. RICHTMYER . . 77
The Coefficient of Expansion of Nickel at its Critical Temperature. H. M. RANDALL 85
The Velocity of Sound. THOS. C. HEBB 89
The Arc in a Magnetic Field. C. D. CHILD 100
Apparatus to Illustrate Pressure of Sound Waves. R. W. WOOD 113
American Physical Society. Minutes of the twenty-sixth meeting. Announcements. New Series in the Arc Spectra of Magnesium, Zinc and Cadmium, *F. A. Saunders;* A PQ Plane for Thermodynamic Cyclic Analysis, *H. N. Davis;* Resonance in Wireless Telegraph Circuits, *G. W. Pierce;* Gas Spectra in the Region of Extremely Short Wave-lengths, *Theodore Lyman;* Luminescence of Sidot Blende, *E. L. Nichols and E. Merritt;* New Phenomena of Fluorescence, *H. W. Morse;* Infrared Emission Spectra of Metals, *W. W. Coblentz;* Theory of Thermoelectromotive Force, *C. C. Thwing;* Proper Distribution of Mass in the Kater Pendulum, *H. C. Richards;* The Nodes of a Bar Vibrating Laterally, *H. C. Richards;* The Ring-Pendulum Method for the Absolute Determination of "*g*," *C. E. Mendenhall;* On the Present Shrinkage of the Earth's Magnetism, *L. A. Bauer;* The Capacity and Resistance of Aluminum Anode Films, *C. McC. Gordon* 115

CVIII. MARCH, 1905.

Theory of the Electrodeless Ring Discharge. BERGEN DAVIS 129
The Comparison of Inductances with Great Precision. A. H. TAYLOR . . . 151
On the Luminous Efficiency of the Carbon Filament. C. E. MENDENHALL . . 160
Circular Dichroism in Natural Rotary Solutions. M. F. MCDOWELL 163
American Physical Society. Minutes of the Twenty-seventh Meeting. Specific Heat of Air at Low Temperatures, *J. S. Shearer and R. C. Fenner;* Thomson Thermoelectric Coefficient in Soft Iron, *E. H. Hall;* Sensitive Quadrant Electrometers, *J. C. McLennan;* Excited Activity from Natural Gases, *L. B. Johnson;* Secondary Radiation Excited in Different Metals by the γ Rays of

303506

Radium, *H. F. Dawes;* Effect of Pressure on the Resistance of Selenium Cells, *F. C. Brown;* Relation Between Electrical Conductivity and Gas Consumption in the Ordinary Gas Flame, *F. L. Tufts;* Elimination of Gas Action in Experiments on Light Pressure, *G. F. Hull;* The Magnetic Susceptibility of Water, *A. P. Wills* 172

New Books. *Raymond:* Alternating Current Engineering; *Weidemann and Ebert:* Physikalisches Prakticum; *Avery:* School Chemistry 190

CVIX. APRIL, 1905.

The Electromagnetic Theory and the Velocity of Light. H. T. EDDY 193

Experiments on Resonance in Wireless Telegraph Circuits. G. W. PIERCE . 220

Water of Constitution and Water of Crystallization. W. W. COBLENTZ . . 252

Thermodynamic Potentials. W. P. BOYNTON 259

The Tuning of Themoelectric Receivers for Electric Waves. A. D. COLE. . . 268

CX. MAY, 1905.

Infra-red Absorption Spectra: I. Gases. W. W. COBLENTZ. 273

The Elimination of Gas Action in Experiments on Light Pressure. G. F. HULL. 292

The Torque between the Two Coils of an Absolute Electrodynamometer. GEORGE W. PATTERSON. 300

On the theory of Electrolytic Rectifier. S. R. COOK 312

The Conduction losses from Carbon Filaments when heated to Incandescence in Various Gases. L. W. HARTMAN 322

An Optical Determination of the Zero Point in the Telescope-Mirror-Scale Method. A. DE FOREST PALMER, JR. 333

CXI. JUNE, 1905.

Infra-red Absorption Spectra, II. W. W. COBLENTZ 338

The Electric Arc in a Vacuum. C. D. CHILD 364

American Physical Society: Minutes of the Twenty-eighth Meeting. The Relation between Radioactivity and Composition of Uranium Compounds: *H. N. McCoy;* Relation between P. D. and Spark-Length for Small Values of the latter: *Glenn M. Hobbs;* The Influence of Electrodes upon Spark Potentials: *John E. Almy;* Some Oddities in Lenses: *Albert B. Porter;* On Abbe's Diffraction Theory of Microscopic Vision: *Albert B. Porter;* The Relative Positions of the Arc and Spark Lines of the Spectra of Titanium Sinc: *N. A. Kent;* The Black Spot in Thin Liquid Films: *E. S. Johonnot;* Report of Progress in Ruling Diffraction Gratings: *A. A. Michelson;* Use of the Concave Mirror with Diffraction Gratings: *A. A. Michelson;* The Dielectric Strength of Double-Refracting Crystals: *John E. Almy;* On the Comparison of Mutual Inductances: *A. H. Taylor;* The Possible Variation of Inductance Standards with Temperature: *A. H. Taylor;* On the Variation of a Capacity with Temperature: *E. M. Terry;* Infra-red Emission Spectra of Vacuum Tubes: *W. W. Coblentz;* Diffraction Fringes from Electric Discharges and from Fluid Streams: *Arthur L. Foley and Joseph H. Haseman;* Experiments on the Flow of Electricity in Metals under Changes of Pressure: *C. B. Thwing* 379
